

Desktop Soft Phone For Windows

sipVine's desktop soft phone for Windows, sipSoft, is perfect for users who prefer desktop dialing as an alternative to a traditional

desk phone. Pair with the sipPanel and you have a full-featured view of the entire organization all operated from your keypad and mouse.

It is also great for highly mobile employees when they are away from their desk phone at the office.

sipSoft is best utilized with a USB or Blue Tooth headset.

Like the desk phone, users can transfer calls, conference in other users, place calls on hold, mute calls, and even record a call on demand and save it to their desktop.

Call History – This feature is a scrolling list of your call history. You can click and redial these numbers quickly. You can also search for numbers in your history for tracking or redialing purposes.

Contacts – Users can manually add contacts or add contacts from the call history. Contacts can be added to the favorites button, searched, and clicked for calling.
