

Mobile Soft Phone

*Powered by Bria
For Android & Apple*

sipVine's soft phone for Mobile Devices, sipSoft, powered by Bria, is perfect for users on the go. Turn on the app and your mobile device works as if you are at the office!

Like the desk phone, users can transfer calls, conference in other users, place calls on hold, and mute calls. Dialing out from the app delivers the caller ID of the business, not your cell phone number.

Office phone users can transfer calls to your extension. External callers can reach you by calling your office direct dial number. The device can even be added to an option on the company auto attendant and this device can be included in ring groups.

Call History – This feature is a scrolling list of your call history. You can click and redial these numbers quickly. You can also search for numbers in your history for tracking or redialing purposes.

Contacts – Users can manually add contacts or add contacts from the call history. Contacts can be added to the favorites button, searched, and clicked for calling.
